PortManager™

Excellence in Container and Cargo Tracking Software

The PortManager™ suite of applications and modules provides a full range of features to facilitate the smooth running of a port operation.

PortManager™ Overview

The PortManager™ suite of applications and modules provides a full range of features to facilitate the smooth running of a port operation.

Being modular based, PortManager™ works as well in a lower volume port as it does in a high volume port.

This modular based approach also allows clients to only purchase modules that they will use, keeping costs down. As their business grows or needs change, other modules can be added.

Any module within PortManager™ can be tailored to suit the individual requirements of a particular port.

For ease of use, all screens utilise the standard Windows® 'look and feel'.

PortManager™ Functionality

- Import and export functions for containers, cargo and vehicles.
- Full on-site tracking of containers, cargo and vehicles.
- Stripping and stuffing functions.
- Yard Overview via PortManager™ YardViewer.™
- Yard Planning via PortManager™ YardPlanner.™
- Ship Planning via PortManager™ ShipPlanner.™
- Comprehensive management, operational and miscellaneous reports.
- Multi-Stevedore capabilities.
- Equipment maintenance and stock allocation.
- Radio Data Terminal (RDT) integration.
- Daily equipment task allocations.
- Automatic job allocation (Requires RDT Integration).
- Pilotage control.
- Storage and other invoicing functions.

CBS Software current installations also include features such as Australian Customs and Web integration.

PortManager™ Benefits

- Improves port efficiency by streamlining operational process.
- Site security is improved as all transactions are recorded and audited.
- Enhances cargo tracking into, within, and out of the port.
- Management reports become more readily available.
- User ID based security prevents unauthorized access to any part of the system.
- Existing staff can be better utilized as time consuming manual processes are eliminated.
- Having a proven software solution improves the profile of the port.

PortManager™ System Architecture

- Runs on standard Windows® based platforms and utilises an IBM® database and technology.
